

Project Initialization and Planning Phase

Date	04 July 2026
Team ID	
Project Title	Credit Card Approval Prediction
Maximum Marks	5 Marks

Proposed Solution report: The project is aims the credit card approval process using machine learning. The system analyzes the applicant details such as income, employment status, credit history, and other financial information to predict whether a credit card application should be approved or rejected. This reduces manual effort, improves accuracy, and speed up decision-making

Project Overview	
Objective	Machine Learning model to accurately predict credit card approval prediction based on applicant information.
Scope	• Collect applicant data • Preprocess and clean the dataset. • Train and test ML models. • Predict approval/rejection • Displays prediction results through a web application

Problem Statement	
Description	Manual credit card approval is time -consuming, error-prone, and inconsistent.
Impact	Delays approvals, increase operational costs, and may lead to incorrect decisions

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU	Intel i5/Ryzen5
Memory	RAM	8 GB
Storage	Disk space	256 GB SSD
Software		

Frameworks	Backend	Flask
Libraries	Python libraries	scikit-learn, pandas, NumPy, matplotlib
Development Environment	IDE	Jupyter Notebook, VS Code
Data		
Dataset	Source	Kaggle Credit Card Approval Predictions(CSV)
