

Solution Requirements

Date	04 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR):** The system allows users to enter applicant details such as income , education , employment status , loan amount, credit history, and other financial information. It processes the data using a machine learning model and predicts whether the credit card application will be Approved or Rejected. The system displays the prediction result through a simple web interface for easy decision making.
- **Non-Functional Requirements (NFR):** The system should be secure, reliable, user data , provide accurate prediction results, ensure high performance, and work smoothly across different devices and web browsers.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely access the application.	High
2	Authorization I	Only authorized users can make predictions	High

3	External interfaces	Accepts CSV datasets and user input through a web interface.	Medium
4	Transactions processing	Processes applicant information and predicts approval instantly.	High
5	Reporting	Displays prediction results with approval or rejected status.	High
6	Business rules, etc.	Prediction is based on applicant income , employment , education ,credit history, loan amount ,etc.	High
7	Compliance to laws	Protect user information and maintain data privacy.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric/ Acceptance Criteria
1.	Performance	Prediction should be fast.	Less than 2 seconds
2.	Scalability	Handle multiple prediction requests	100+users.

3.	Security & Privacy	Protect applicant data	Secure data handling
4.	Reliability	Provide consistent predictions results.	99% system availability
5.	Usability	Easy-to-use interface for users	Simple and responsive UI
